**Skinner**

Skinner came to us very thin, but food wasn't his issue. He would have diarrhea every day & throw up every 3 or 4 days. He would violently throw up so bad he would lose control. He also couldn't lay down to sleep. He would sleep hunched over another cat's back that he is friends with. We took him to VVS in Charlottesville, and they diagnosed him with a sliding hiatal hernia. In fact, his stomach was coming out of his diaphragm, and it was up by his lungs. Early in June he had surgery by the outstanding team at VVS. They tacked his stomach in place and closed the hernia. Wow! big surgeries have big bills and this was \$6,000!! A Special Thanks to **Wayne** who sponsored Skinner And his Big Bills and said, "Skinner is worth it". Skinner is now gaining weight, eating normal food with no antacids and can curl up to sleep for the first time in his life! He still might have some allergies, but he is feeling so good!
